Office Action Summary

Application No.

10/509,839

Applicant(s)

FUKUNAGA ET AL.

Examiner

KENDRA D. CARTER

Art Unit

1617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 August 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 9, 12, 13, 17-20, 22-24, 26 and 27 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 9, 12, 13, 17-20, 22-24, 26 and 27 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

The Examiner acknowledges the applicant's remarks and arguments of August 4, 2008 made to the office action filed March 5, 2008. Claims 9, 12, 13, 17-20, 22-24, 26 and 27 are pending. Claim 25 is cancelled.

In light of the amendments, the 35 U.S.C. 112, first paragraph rejection of claim 25 is withdrawn.

For the reasons in the previous office action and below, the Applicant's arguments of the 35 U.S.C. 103 (a) rejection of claims 9 and 12-27 as being unpatentable over Asano et al. in view of Finkenaur was found not persuasive, thus the rejections are upheld.

Due to the cancellation of claim 25, the modified 103(a) rejection is made below. The Applicant's arguments are addressed below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1617

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 12-24, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asano et al (U.S. Patent No. 6,046,164), in view of Finkenaar (EP 0 267 015).

Asano et al. teaches a method for treating diseases of periodontal tissue by administering a basic fibroblast growth factor (see abstract, in particular.) Asano et al. teaches that the bFGF can be prepared in various formulations, including liquids by combining bFGF with a pharmacologically acceptable additive, such as a solvent, stabilizer, etc. (see column 4, lines 4-15, in particular.)

Asano et al. does not specifically teach providing hydroxypropyl cellulose in the bFGF composition, as recited for example in claim 9.

Finkenaar teaches that a stabilizing effective amount of a water-soluble polysaccharide can be provided in medicinal compositions containing a polypeptide growth factor with mitogenic activity to stabilize the polypeptide growth factor against loss of biological activity in the presence of moisture (see abstract, in particular.) Finkenaar teaches that basic fibroblast growth factor is an example of such as polypeptide growth factor that can be stabilized with the polysaccharide (see page 3,

lines 25-30, in particular.) Finkenaur further teaches that the polysaccharides act to increase the viscosity of the composition (see page 4, lines 55-65, in particular), and thus are thickeners. Finkenaur teaches that the stabilizing polysaccharide for stabilizing the polypeptide growth factor can be selected from among polysaccharides including methyl cellulose, hydroxyethylcellulose, hydroxypropyl methylcellulose, and hydroxypropyl cellulose (a hydroxypropyl ether derivative of cellulose), as in claim 9 (see page 3, lines 35-50, in particular.)

Regarding the recitation that hydroxypropyl cellulose contains 53.4-77.7% of hydroxypropyl group, as in claim 9, Finkenaur teaches that the solubility of the cellulose derivatives is determined by degree of substitution of the ether groups, and teaches that a suitable degree of ether substitution may be at least 0.35 ether groups per hydroglucose unit (see page 3, lines 44-50, in particular.) Furthermore, it is considered that one of ordinary skill in the art at the time the invention was made would have found it obvious to vary and/or optimize the amount of ether substitution of the celluloses, according to the guidance provided by Finkenaur, to provide a composition having desired properties, such as desired solubility. It is noted that "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454, 456, 105 USPQ 233,235 (CCPA 1955.)

Accordingly, it is considered that one of ordinary skill in the art at the time the invention was made would have found it obvious to incorporate the hydroxypropyl cellulose stabilizer/thickener of Finkenaur into the bFGF composition taught by Asano et al. and administer for the treatment of periodontal disease, because Asano et al. teaches that a composition comprising bFGF and a stabilizer can be administered for the treatment of periodontal disease, and Finkenaur teaches that polysaccharides such as hydroxypropyl cellulose (that are also thickeners) act to stabilize bFGF. Thus, one of ordinary skill in the art would have been motivated to provide the polysaccharide of Asano et al. in the bFGF composition of Asano et al. for administration with the expectation of administering a stabilized formulation capable of treating periodontal disease. Therefore, the method of claim 9 is obvious over the teachings of Finkenaur and Asano et al.

Regarding claims 12 and 15, Asano et al. teaches that the bFGF composition can treat periodontitis (periodontosis.) Regarding claims 13-14 and 16, Asano et al. teaches that a suitable content of bFGF in the composition can be from 0.001 to 20%, which is the same as the ranges being claimed. Regarding claim 17, Asano et al. teaches that the composition can be administered for repair of periodontal tissue after tooth extraction, and for regeneration of dentin defected by dental caries, as recited in the claim.

Regarding claims 18-19, Asano et al. teaches that the bFGF can be combined with pharmacologically acceptable additives, such as a suspending agent, stabilizer or filling material (see column 4, lines 1-13, in particular), and thus teaches that an inactive and non-toxic additive can be provided. Asano et al. also teaches that the bFGF can be combined with a solvent, and the composition can be prepared by a known method such as dissolution of the bFGF. Finkenaar teaches providing a polysaccharide (thickener) in the composition, as discussed above. Accordingly, the references teach providing the preparation in a solution for dissolution with a thickener and an inactive and non-toxic additive as recited in the claims.

Regarding claims 20-21, Finkenaar teaches the stabilized compositions can be in the form of aqueous medicinal compositions (see page 3, lines 55-60, in particular.)

Regarding the viscosity of the preparation as recited in claims 22-24, it is noted that Finkenaar teaches that the polysaccharide stabilizer can be provided to give a desired viscosity, such as a viscosity in the range of 1-5000 cps (see page 4, lines 55-65, in particular), which overlaps and/or encompasses that claimed. Finkenaar teaches that the increased viscosity improves the residence time of the effective concentration of the growth factor (see page 4, lines 55-64, in particular.) Finkenaar also generally teaches that the amount of cellulose derivative provided can be selected according to the concentration of the growth factor, the type of formulation and the like (see page 3, lines 55-62, in particular.) Accordingly, it is considered that one of ordinary skill in the art

Art Unit: 1617

at the time the invention was made would have found it obvious to vary and/or optimize the amount and/or type of the cellulose derivative stabilizing agent provided in the composition, according to the guidance provided by Asano et al. and Finkenaure, to provide a composition having desired stabilization, viscosity and residence time properties. It is noted that "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454,456,105 USPQ 233,235 (CCPA 1955.)

Regarding claims 26-27, it is noted that as the combined teachings of Asano et al. and Finkenaure renders the claimed composition obvious, the property of such a claimed composition will also be rendered obvious by the prior art teachings, since the properties, namely the stable retention of bFGF over a time period, are inseparable from its composition. Therefore, if the prior art teaches the composition or renders the composition obvious, then the properties are also taught or rendered obvious by the prior art. In re Spada, 911 F.2d 705, 709, 15 USPQ 1655, 1658 (Fed. Cir. 1990.) See MPEP 2112.01. The burden is shifted to Applicant to show that the prior art product does not possess or render obvious the same properties as the instantly claimed product.

Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive.

The Applicant argues that the Examiner completely ignores the fact that Finkenaur specifically equates all the named different stabilizers as equally "preferred." Thus, all a skilled artisan could and would infer based on Finkenaur was that all these agents result in equally good combination. Only the present application teaches that a significantly better result can be achieved using the specific combination. In the Declaration, Dr. Ohkuma states that "cellulose derivatives other than hydroxypropyl cellulose of the present invention cannot be practically used", because "a standard range of a medicament is generally determined in the range of 95-105%, so that if the remaining ratio of bFGF is 88% or less, it is far from the standard content." Further, the prior art teaches that stabilization for EGF and bFGF is not similar. Thus, Finkenaur does not disclose the superiority of the claimed combination or that a bFGF would work with any of the disclosed stabilizers. Finkenaur's teachings are general with respect to use of a range of different polysaccharide stabilizers in combination with a range of different polypeptide growth factors, not the specific combination.

The Examiner disagrees for reasons given in the previous office action, and repeated below. The rejections are based on obviousness and not anticipation, thus the specific combination is not taught. Particularly, Finkenaur teaches the desirability of using water soluble cellulose derivatives to impart the stability enhancement, and furthermore teaches that "the solubility of the cellulose derivatives is determined by the degree of substitution (D.S.) of ether groups and the stabilizing derivatives useful in the present invention should have a sufficient quantity of such ether groups per an hydroglucose unit in the cellulose chain to render the derivatives water soluble" (see

page 3, lines 44-48, in particular), and thus Finkenaar teaches that the water-solubility and thus stabilization properties of the polysaccharides can vary according to the degree of substitution of the compounds. Furthermore, it is noted that properties such as the length of the polysaccharide can affect the solubility and thus the stabilization properties of the polysaccharide. Accordingly, the fact that a composition having hydroxypropyl cellulose can be prepared to provide a remaining ratio of bFGF after 7 days of 94.9%, and compositions comprising methyl cellulose or hydroxypropyl methyl cellulose can be prepared that result in a less than 88% remaining ratio of bFGF, is not considered unexpected, as Finkenaar teaches that the solubility, and thus the stabilization properties of the polysaccharide are dependent upon not only the type of polysaccharide used, but also for example upon the degree of substitution of the polysaccharide. Accordingly, it is considered that one of ordinary skill in the art at the time the invention was made would have found it obvious to provide the desired polysaccharides, and to optimize and/or adjust the degree of substitution of the polysaccharides, as well as other contributing stability factors such as the polysaccharide molecular weight, to provide a composition having the desired stability. Thus, it is considered that Applicants do not provide sufficient evidence of unexpected results in comparison to the closest prior art.

Again, Finkenaar teaches that the solubility, and thus the stabilization properties of the polysaccharide are dependent upon not only the type of polysaccharide used, but also for example upon the degree of substitution of the polysaccharide. Accordingly, it is considered that one of ordinary skill in the art at the time the invention was made

Art Unit: 1617

would have found it obvious to provide the desired polysaccharides, and to optimize and/or adjust the degree of substitution of the polysaccharides, as well as other contributing stability factors such as the polysaccharide molecular weight, to provide a composition having the desired stability. Thus, it is considered that Applicants do not provide sufficient evidence of unexpected results in comparison to the closest prior art.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

No claims allowed.
